CONCEPT: The Anchor Capability Regional Response Concept is a method through which emergency response resources for a CBRNE (Chemical, Biological, Radioactive, Nuclear, Explosive) event will be identified and collectively used throughout a particular region. Regional efforts to quantify and coordinate these resources will greatly enhance our ability to respond to CBRNE events.

VISION: An Integrated CBRNE Response throughout North Dakota

MISSION: Regional Coordinators will facilitate, coordinate, develop, educate, plan, and promote regional CBRNE response for a safer and more secure public.

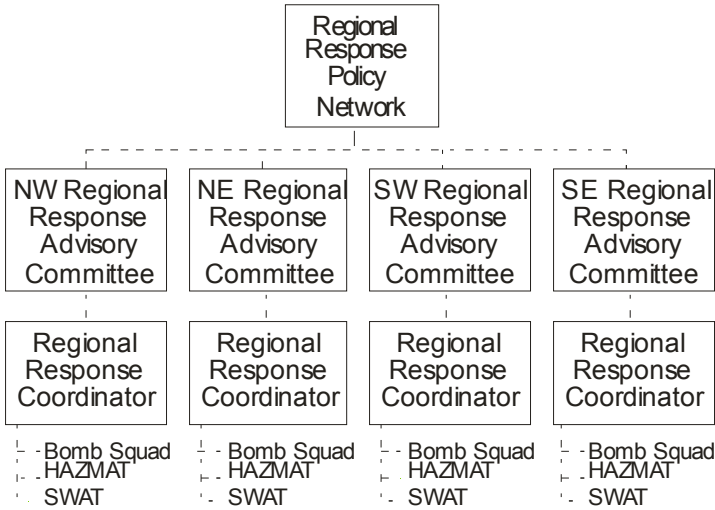

GOALS:

- Develop appropriate products and services that facilitate a regional CBRNE Response System.
- Gain and maintain customer and stakeholder relationships supportive of Regional CBRNE Response.
- Develop appropriate systems that accommodate regional CBRNE Response.

OBJECTIVES:

Develop appropriate products and services that facilitate a regional CBRNE Response System.

- Develop a boilerplate mutual aid template, assess current mutual aid and evaluate against template, and if needed, work with jurisdictions and disciplines to adopt new mutual aid agreements.
- Conduct survey of response assets (equipment and people) within the region.
- Conduct a gap analysis of equipment and personnel needs regionally. Develop deployment checklist and standard response protocols.
- Adopt common terminology definitions based on NIMS criteria.

Regional Emergency Response Policy Network

The Regional Emergency Response Network assures uniform response policy is implemented on a regional level in terms of interoperable operating procedures, equipment, and protocols.

Regional Emergency Response Advisory Committee

The Advisory Committee is tasked to identify Regional equipment, training, and exercise needs.

Regional Emergency Response Coordinators

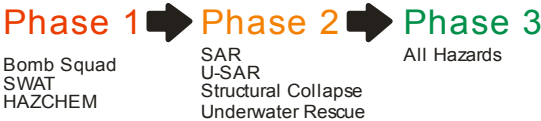

The Regional Emergency Response Coordinators will coordinate, facilitate, develop, educate, plan, and promote Regional CBRNE response for a safer and more secure public.

Gain and maintain customer and stakeholder relationships supportive of Regional CBRNE Response.

- Develop introductory materials;
- Conduct introductory visits with all disciplines and local government; and
- Facilitate the conduct of Regional Advisory Committee meetings.

Develop appropriate systems that accommodate regional CBRNE Response.

- Study and analyze current deployment systems and criteria;
- Develop and implement a common tiered Regional CBRNE Response system;
- Develop and implement a funding allocation system that distributes Homeland Security Grant Program funds within the regional model;
- Develop and implement the appropriate system sustainment models inclusive of local, state, and federal funding streams to maintain response anchors and other regional CBRNE Response capabilities ; and
- Develop and implement an intra-regional communications methodology.

Benefits of Regional Response

- A safer and more secure public;
- More efficient utilization of resources for a CBRNE event;
- A collaborative effort that promotes a sharing of ideas and resources;
- Facilitates smaller jurisdictions access to resources located in larger jurisdictions; and
- Larger communities benefit during complex and catastrophic events when local resources are not adequate.
